Quality and Safety Update

December 2010

It has been another great year for Linear Composites Ltd's Quality and Safety Management Systems. In 2010 we managed a successful transition of both our Quality Management System from ISO 9001:2000 edition, to the recently revised ISO 9001:2008 edition and the successful transition of our Safety Management System from BS OHSAS 18001 to the new BS OHSAS 18001:2007 edition.

Quality and Safety Representative Chris Kirby stated "We are delighted that our BS OHSAS 18001 certification has been renewed following the three day surveillance visit. BS OHSAS certification is very important to Linear Composites Ltd, it indicates just how serious we take the health and safety of our employees. Our BS OHSAS compliant Safety System allows us to follow procedures which go above and beyond what is required within health and safety legislation, thus fulfilling what we consider to be our corporate social responsibility to ensure that we maintain a HEALTHY and SAFE working environment."

During the coming year Linear Composites Ltd will continue to invest both time and effort into both our Quality and our Safety Management Systems. In the spirit of the ISO 9001 and BS OHSAS 18001 standards we aspire to continually improve our systems to ensure that our commitment to both safety and quality is maintained at the highest level, consistent with legal and certification requirements. Continual improvement allows us to meet the requirements of both old and new customers in a constantly changing market.
